

How SkinIO Works

SkinIO helps you get to know your skin so that you can be on the look-out for anything **new** or **changing**. It takes minutes for a medical staff member to take your photos today in an exam room. SkinIO will then automatically detect and track your moles to help you monitor your skin, even after you leave the office today.

SkinIO results are NOT a substitute for medical advice or diagnosis. Always contact your doctor or another qualified healthcare provider if you have questions or concerns about a particular skin condition or your general health at any time.
